Serving Industry Since 1906

Three-Wheel Edge Tracker

National Filter Media offers a superior Edge Tracker assembly with the best of both the single and double roller design for use on PIP edges of vacuum filter belts.

Advantages of the new Three-Wheel Edge Tracker assemblies

VERSATILE—Use in place of current tracking assembly or in conversion of spring rope pocketed belts to rubber edge tracking design.

CONTACT AREA, NOT POINT—The three wheels cause the rubber to be held against a section of the roller, not just a point.

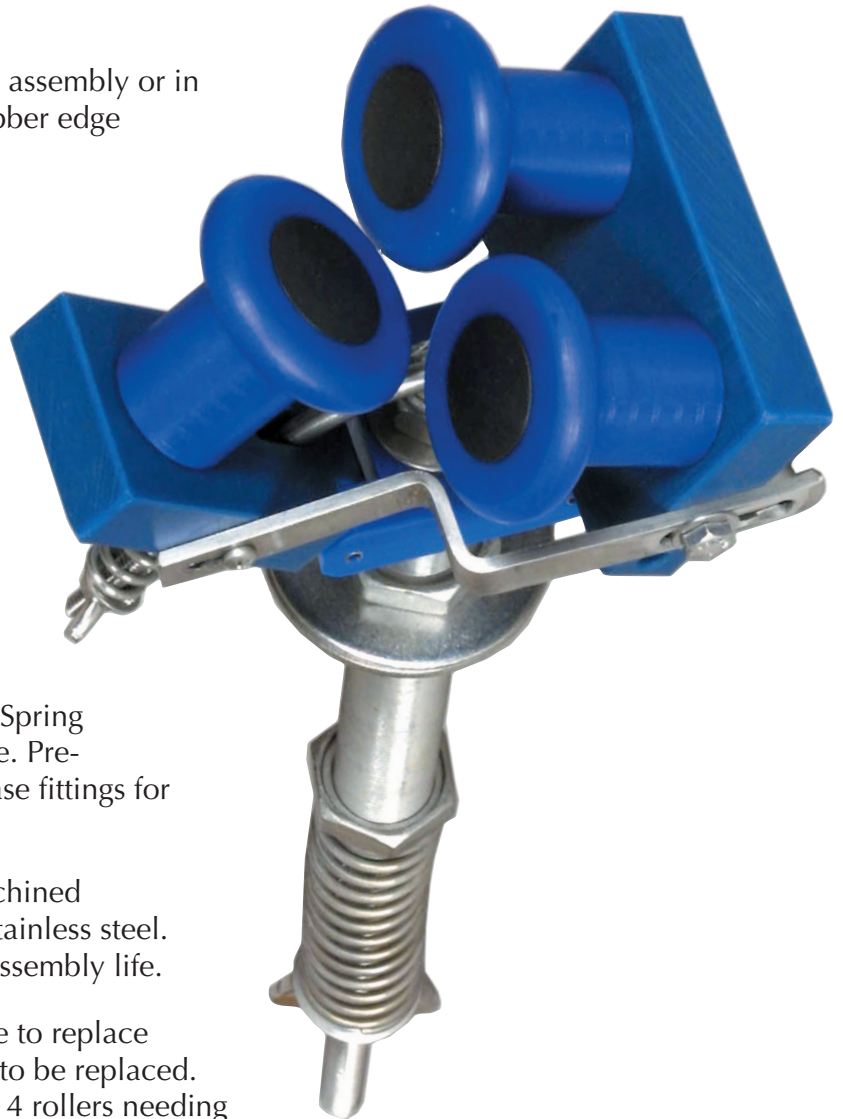

PREVENT PREMATURE BELT FAILURE—Three-wheel tracker design is able to spread the stress out on the rubber edging.

TOUGHER THAN STEEL—Rollers and all plastics parts constructed of UHMW polyethylene which has higher abrasion resistance than stainless steel.

FLOATING PRE-LUBRICATED ROLLERS—Spring assembly allows rollers to float over edge guide. Pre-lubricated rollers for longer roller life with grease fittings for each roller.

HINGE-PIN DESIGN—Roller assembly in machined throughout complete with metal parts of 316 stainless steel. Special hinge-pin designed for longer tracker assembly life.

25% LESS ROLLER PARTS—When it is time to replace EdgeTracker rollers, only 1 or 3 will ever need to be replaced. Unlike the other which could have as many as 4 rollers needing replacement.
